# Biosecurity Policy

Kauri Park Nurseries is a member of the Plant Production Biosecurity Scheme. We work hard to keep pests and diseases out of our nursery, to stop them spreading through the nursery and to prevent them from spreading with the plants we ship out to customers.

The biosecurity scheme is a single system recognising and managing the complexity and diversity among plant producers.

End-to-end risk management from nursery inputs, through production, to plant buyers, and their environments is protected by:

- Increased plant producer responsiveness to pest threats ... before nursery stock is distributed to its customers.
- All plant material from seed and propagule material is able to be tracked and traced to the plantings and projects.
- Strengthening nursery hygiene measures, pest risk management and establishing Kauri Park as a certified plant producer and as a trusted supplier.

Kauri Park is a registered Transitional Facility and certified by the Ministry of Primary Industries to meet the requirements of Section 40 of the Biosecurity Act 1993 and the standard for Transitional Facilities for General Uncleared Risk Goods TFGEN.
